Three Directions.
Wide Net.

Design exploration for CAMEOS-generated grant proposal output.

A

EVOLUTION

Same structure as today — brand properly applied for the first time.

Navy header bar · Cyan section underlines · Real logo · Lowest funder disruption.

B

MODERN CATALYST

Bold white space · Left nav bar · Pull-stat callout boxes · Editorial feel.

Contemporary CME aesthetic · Distinguishable in any funder's inbox.

C

EXECUTIVE PREMIUM

All-dark cover · Maximum brand authority · White-on-navy throughout.

Numbered LOs · Navy pill headers · High-end first impression.

BONUS: TA Accent Color System

All 13 therapeutic areas · Any concept can incorporate per-TA accent colors · Full palette on final page.

Catalyst Medical Education, LLC

Audience Generation Powered by NexusMedX Distribution Network

STATEMENT OF NEED

Despite meaningful advances in diabetes management, diabetic ketoacidosis (DKA) remains a life-threatening complication driving significant morbidity and preventable hospitalizations. An estimated 150,000–200,000 DKA episodes occur annually in the United States, with associated inpatient costs exceeding $5 billion.

Current ketone monitoring approaches rely on fingerstick tests — logistically burdensome and associated with low adherence. Continuous ketone monitoring (CKM) represents an emerging technology capable of real-time ketone data, analogous to continuous glucose monitoring.

LEARNING OBJECTIVES

1. Describe the pathophysiology and risk stratification of DKA across patient populations.
2. Evaluate emerging CKM technologies and assess their potential clinical utility.
3. Apply evidence-based criteria to identify patients likely to benefit from CKM integration.

EDUCATIONAL SYNOPSIS

Format	Virtual Roundtable — On-Demand Expert Panel Discussion
Therapeutic Area	Endocrinology / Diabetology
Target Audience	Endocrinologists, Internal Medicine, Diabetes Care Specialists
Expected Learners	5,000 learners · ~500 completers
Grant Request	$99,950 total · $19.99 per learner
Accreditation	Advancing Knowledge in Healthcare (AKH)

THERAPEUTIC AREA ACCENT COLOR SYSTEM — ALL 13 TAs

Each TA gets a dedicated accent color applied to: (1) cover page TA badge, (2) section heading underlines, (3) stat callout bar.
The Catalyst primary palette (Navy #121531 + Cyan #42A4D9) stays constant across all proposals. TA accent = the third color.

USAGE RULE:
TA accent color is used on: cover page TA badge · section heading underline bars · stat callout left border.
All other colors remain canonical Catalyst Navy + Cyan. One accent per proposal. Never two TAs on one proposal.
